

## Fast-Weigh Software Releases New Command Alkon BuildIt Integration

TAC Insight is pleased to announce new direct integration between our cloud-based Fast-Weigh truck ticketing and aggregate sales platform and Command Alkon's BuildIt software. With this new feature, Fast-Weigh users can automatically integrate their ticketing data with BuildIt in real time, allowing their customers who use BuildIt to access their Fast-Weigh data instantly.

### Integration Details

The Fast-Weigh/BuildIt integration module uses customer-based authorization keys to facilitate seamless integration with multiple Command Alkon BuildIt platforms. In addition, if any ticket voids or other updates are performed in the Fast-Weigh scale system, these changes will flow directly down to BuildIt.

We believe this integration will help our industry unify disparate systems and simplify both communication and data access between suppliers and contractors. "By automatically integrating data between platforms, we hope to eliminate data errors and cut down on the handling of data between organizations," said Steve Rasmussen, Principal at TAC Insight.
