Bunting-Elk Grove Village Expands Range of Products

Bunting-Elk Grove Village is excited to announce that we have recently added several new products to our extensive online catalog. We have added new N42 and Electro Magnet products, expanding our already strong online selection. With a bigger selection, we are proud to have expanded our capability to serve the needs of our customers.

Our new stock of plated N42 neodymium disc magnets gives our customers greater options in selecting the perfect neodymium magnet for their application. Neodymium magnets are a member of the rare earth family, and they are the most powerful magnets in the world. There are a number of available options for coatings, with nickel being the most common and most preferred. Neodymium magnets are powerful, versatile, and can be used in a wide variety of applications.

The newly added stock of round electromagnets provide an efficient and economical solution for handling and holding ferrous materials and parts safely and securely. They are available in a number of shapes and sizes, and can be used in a variety of manual and automated applications. They require little maintenance, and are 100% duty cycle.

BuyMagnets.com also offers rectangular flat faced electromagnets, which are ideal for achieving maximum holding force on flat, smooth, dry, unpainted surfaces. They are ideal for surfaces where the entire face of the magnet comes in direct contact with the product being handled. Flat faced electromagnets are designed with a center magnetic pole and utilize the outer case as the opposite pole, and they concentrate the magnetic force at the center of the magnet in order to achieve superior holding power. They are also 100% duty cycle.

By expanding our range of available stock to our customers, we are able to better serve their needs. At BuyMagnets.com, we offer the most powerful magnets available and the widest selection you can find. Available for fast shipment, visit BuyMagnets.com today to find the best magnet for your needs.
